

# Phase 3C-1.2B causal summary

## **Actuation mapping verified**

Persistent isolated middle/ring/palm force is possible; little sweep loses contact.

## **Receiver geometry changed**

Five contacts replace the modeled two; overlap reaches millimetres.

## **Weld carries the residual**

Mean unsupported force is about 33 sphere weights; no actuator saturation.

## **Correct stopping point**

RECEIVER\_CONSTRUCTION\_FAILURE. Zero releases; no validated receiver.
