

No production V1: required evidence still incomplete

Production reset repaired; required simultaneous M/R/L and 4-ms validation remain incomplete.

Reset: original targets, gravity, damping and gains; 77.784 s natural settling + 0.5 s independent confirmation.

Common candidate cache: identical integration state. No artificial qvel zeroing or ctrl re-centering.

At 1/2 ms: complete physical-duration contact exposure; persistent ring and little, but no middle.

At 4 ms: pre-hold speed guard fails at 8 ms before any contact command.

IMP99 has larger overlap; TC10_IMP99 has higher force. Missing exposure prevents selecting either.

No V1, no historical dynamic regression, no bounded-force primitive, receiver, shape, skin, B or RL.
