

Physical admissibility precedes task success

Legacy: CP-C for full-range rigid-contact use

Finite, monotonic, repeatable; overlap reaches 19.6% of radius at 1 N.

Options: bench evidence, not production approval

Three candidates retain friction and reduce deformation; no E/nu is supplied.

Old receiver: rejected, not reinterpreted

6.60-mm settled overlap and 33-weight residual are invalid receiver evidence.

Stop before hand or receiver dynamics

PI contact-option review -> gated force primitive -> only then consider P1.
